Let's Start!

Man and machine meld together.

Learning Outcome

Explain about technology and technical problems in communicative situations.

Ask your partner:

- What parts can humans have replaced with metal or bionic pieces?
- What type of prosthetic limbs (artificial limbs) are more lifelike today?

Can Do Statements

- I can talk about technology and gadgets.
- I can write complex statements using words like *who*, *that* or *which*.
- I can speculate about feelings and impressions.

Let's Explore!

Having metal in our bodies is **foreign*** to us.

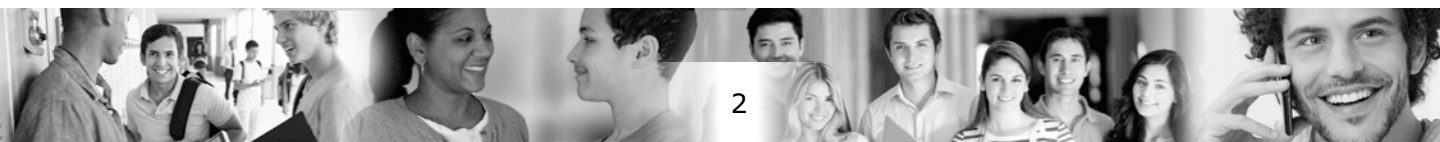

* "Foreign" here means odd or strange.

Instructions: Read the text aloud.

Metal is cold. We perceive it as foreign to us. We don't even allow dentists to put it in our teeth anymore. Why would we want it in our bodies? Well, melding man with machine or creating cyborg humans may demand this, at least for a while.

You may think that cyborgs are those half human, half machine beings from *Star Trek*. They are and they aren't. There are already cyborgs that live among us. There are many who have bionic limbs which operate with signals from their brains. People who are totally colorblind can now have electronic implants that enable them to see color. A new electronic headset that you wear could allow you to play virtual games just by thinking. In the future all of these things may be connected to our nervous systems. Kevin Warwick, who is the founder of Project Cyborg at the University of Reading, uses himself as the guinea pig in his cyborg experiments. He wants to become the world's most complete cyborg. This could allow him to be extra-human. He hopes for a future where he can communicate with others mind to mind.

Man and machine will integrate!

Instructions: Read the text again. Select the correct answer.

- 1) In the future, virtual games ...
 - a. could be half machine.
 - b. could connect to our nervous system.
 - c. could think.
- 2) People who are colorblind ...
 - a. can now have electrical implants.
 - b. can now have electricity implants.
 - c. can now have electronic implants.
- 3) Creating a cyborg is ...
 - a. melting man and machines.
 - b. melding man and machine.
 - c. meltdown man and machine.
- 4) Today it's possible to have ...
 - a. bionic arms or legs.
 - b. bicarbonate limbs.
 - c. biopic arms or legs.

Let's Practice!

There are already cyborgs among us!

Instructions: Choose the words from the Word Bank to correctly complete the sentences.

Word Bank

color / bionic / brains / implants / mind

1. There are many people who have _____ limbs.
2. These are limbs which operate with signals from their _____.
3. People who are totally colorblind can now have electronic _____.
4. These are implants that enable them to see _____.
5. Kevin Warwick dreams of a future where he can communicate with others mind to _____.

Extension Activity

Write about Kevin Warwick, founder of Project Cyborg at the University of Reading.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Listen to Kevin Warwick talk on YouTube or look him up on a web page to find out about cyborgs.
- Identify the type of implants and experiments he has done on himself.
- Choose one and write 100 words explaining what he thinks people may, might, could be like in the future.
- Express your opinion on his ideas.

Self-Assessment

Yes No

I explain one of Kevin Warwick's ideas on cyborgs.

☐ ☐

I explain what Kevin Warwick speculates about humans and the future.

☐ ☐

I give my opinion on Kevin Warwick's ideas and research.

☐ ☐

Target Words

- **colorblind** (adjective): unable to see color
e.g. People who are colorblind can now have implants that allow them to see color.
- **to enable** (verb): to make something possible
e.g. Implants enable people who are colorblind to see color.
- **founder** (noun): the person who starts an organization
e.g. Kevin Warwick is the founder of Project Cyborg.
- **guinea pig** (noun): a test subject
e.g. Kevin Warwick uses himself as a guinea pig to test his theories.
- **extra-human** (adjective): more than human
e.g. He hopes that implants will make him extra-human.
- **to meld** (verb): to combine
e.g. In the future, man and machine will meld.

Learning Points

Modal Verbs for Speculation

You can use modals to talk about degrees of certainty.

You use them to describe what is definite, probable, possible, or impossible from the speaker's point of view.

You can use *must*, *may*, *might*, and *could* to describe degrees of certainty.

Must = You are quite sure / It's a good guess

Couldn't / Can't = You are quite sure it's not / It's a good guess it's not

May / Might / Can / Could = Maybe

May not / Might not = Maybe it's not

Examples:

- *Creating cyborg humans may demand we use metal in our bodies.*
- *You may think that cyborgs are those half human, half machine beings from "Star Trek".*
- *Bionic limbs must be a better alternative than those which are not.*
- *A new electronic headset that you wear could allow you to play virtual games just by thinking.*
- *In the future all of these things may be connected to our nervous systems.*

Learning Points

Subject and Object Relative Clauses

You put a relative clause immediately after the noun it talks about.

You use a relative clause with *which* for things to make the thing you are talking about clearer.

In spoken English and written English, *that* often replaces *which* or *who*. *Which* is generally more formal than *that*.

Where and *when* are also connectors that can begin relative clauses when they modify a noun (rather than a verb).

Relative clauses answer the question "What kind / type of ... ? " or "Which ... ?".

Example	Clause	Relative connector
<i>People who are totally colorblind can now have electronic implants that enable them to see color.</i>	who are totally colorblind (Which people?)	who
<i>A new electronic headset that you wear could allow you to play virtual games just by thinking.</i>	that you wear (What type of headset?)	that
<i>He hopes for a future where he can communicate with others mind to mind.</i>	where he can communicate with others mind to mind (What type of future?)	where
<i>That was the day when he decided to change his future.</i>	when he decided to change his future (Which day?)	when
