Let's Start!

Let's review!

Learning Outcome

Explain about technology and technical problems in communicative situations.

Ask your partner:

- What do you wish you could change about yourself?
- What type of implants would you consider if they were offered?

Can Do Statements

- I can speculate about feelings and impressions.
- I can express complex statements using words like *who*, *that* or *which*.
- I can talk about wishes and imaginary situations.

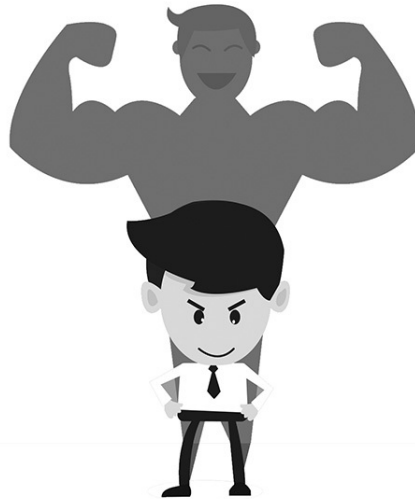

Let's Explore!

Lift yourself out of **the masses***!

* "The masses" means the general population.

Instructions: Read the text aloud.

If you wanted to be different when you were young, but weren't, we could change that. If you hoped for a very different future, but didn't get it, you should make it happen.

If you wished you had special powers, but didn't, you should come and see us. If you always thought there would be a way to lift yourself out of the masses, then you would be right.

The scientists who work at Micro Mind and Body can transform you. You could become the extra-human that you always dreamed of being.

With your first microchip implant you would see a vast difference. The chip that we produce would enable you to sense others and perceive their moods more clearly.

The second chip, which is our latest device, can make you stronger and more agile. The third integrates with the first two seamlessly. If you choose this third option, your brain power would increase as well.

Be the enhanced cyborg that you always wanted to be! Come to Micro Mind and Body and move into unmapped territory today!

Let's Practice!

Be a better you!

Instructions: Read the text again. Select all the correct answers.

What is possible at Micro Mind and Body?

1. They can transform you.
2. You could fly like a superhero.
3. You could become extra-human.
4. You would see a vast difference.
5. You would receive bionic limbs.
6. Their implants would enable you to sense others.
7. You could perceive their moods more clearly.
8. You can be an enhanced cyborg.

Let's Practice!

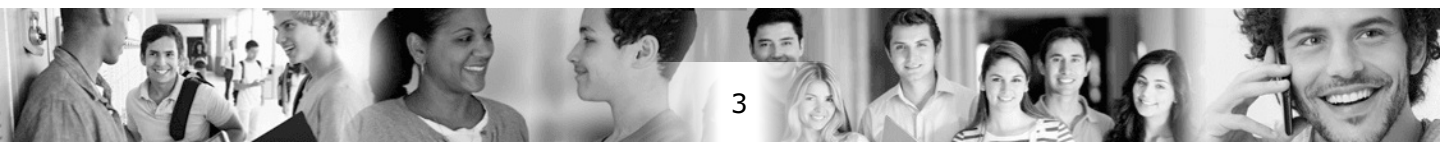

What would you do?

Instructions: Clasify the sentences into the correct box.

- you hoped for a different future
- you should make it happen
- your brain power would increase
- you could change that
- you wanted to be different
- you wished you had special powers
- you chose the third option
- you always thought there must be a way
- you should come and see us

Condition (If ...)

Result

Extension Activity

Write your thoughts on computer chip enhancement.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Write your thoughts on computer chip enhancement.
- For each, identify what you think the result of each enhancement could be.
- Say which enhancement you would like for yourself and why.
- Explain your ideas in 100 words.
- Read your ideas to someone.

Self-Assessment

Yes

No

I identify enhancements I think would be useful.

☐ ☐

I use structures that talk about wishes and imaginary situations.

☐ ☐

I express how I feel about enhancements.

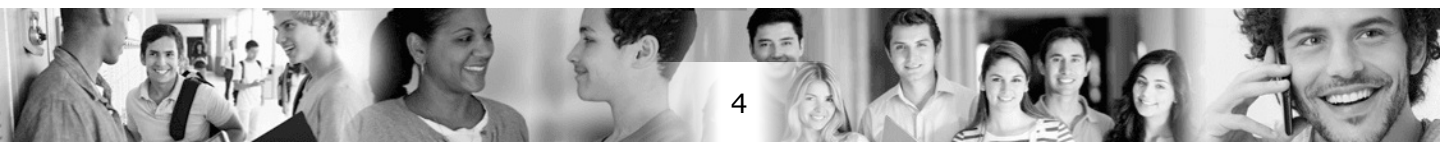

☐ ☐

I read my ideas aloud to someone.

☐ ☐

Target Words

- bioartificial** (adjective): artificially created in a lab
e.g. Bioartificial organs grown from your own cells are a perfect match.
- microchip** (noun): a small electronic device
e.g. Soon we may be able to get a microchip implanted in our brain.
- device** (noun): a machine invented for a specific purpose
e.g. When you think of a robot, is it a device that resembles a human?
- cyborg** (noun): a being that is part human and part machine
e.g. There are cyborgs in the "Star Trek" series!
- to integrate** (verb): to mix and join
e.g. How do you see robots integrating into our lives?
- to enable** (verb): to make something possible
e.g. Implants enable people who are colorblind to see color.
- to perceive** (verb): to notice; to be aware of
e.g. Bionic eyes allow people to perceive light.
- to sense** (verb): to feel
e.g. They have been working toward creating robots that sense touch.
- seamlessly** (adverb): without problems
e.g. CGI seamlessly integrates the fantastic and the real.
- unmapped** (adjective): unknown; uncharted
e.g. We could turn outward to take in all of unmapped space.

Learning Points

Talking about Wishes and Imaginary Situations

You use *wish* to talk about things you do not have/do or cannot have/do.

You use the second conditional to talk about situations that are possible, but not likely.

When you use the second conditional, you are thinking about the future. We are thinking about a particular condition in the future, and the result of this condition. However, there is not a real possibility that this condition will happen.

You can also use *should*, *could* or *might* in place of *would*, in the second conditional.

Condition (Past Simple tense)	Result (modal + base form)
If you wanted to be different,	you could change that
If you hoped for a different future,	you should make it happen
If you wished,	you should come and see us
If you chose this third option,	your brain power would increase

We use a comma after the *if* clause when it is at the beginning of the sentence. This shows that the sentence is not in the natural order.

Examples:

- *If you wanted to be different when you were young, but weren't, you could change that.*
- *If you hoped for a very different future, but didn't get it, you should make it happen.*
- *If you wished you had special powers, but didn't, you should come and see us.*
- *If you thought there must be a way to lift yourself out of the masses, then you would be right.*
- *If you chose this third option, your brain power would increase as well.*

Learning Points

Subject and Object Relative Clauses

When you want to make which person or thing you are talking about clearer, you use a relative clause.

You can begin a relative clause with *who* for people, *which* for things or *that* for either people or things.

In spoken English you usually use *that*, rather than *which* or *who*.

You put the relative clause immediately after the noun it talks about.

A subject relative clause describes the subject of the clause.

Example:

The man who called wanted to speak to Tom.

Which man? The man who called.

The clause *who* called immediately follows man - the noun it describes.

An object relative clause describes the object of the clause.

Example:

The book that I lent you was my father's.

Which book? The book I lent you.

Example	Clause	Relative Connector	Type of Relative Clause
<i>The scientists who work at Micro Mind and Body can transform you.</i>	who work at Micro Mind and Body	who	subject
<i>Become the extra-human that you have always dreamed of being.</i>	that you have always dreamed of being	that	subject
<i>The chip that we produce enables you to sense others.</i>	that we produce	that	object
<i>Be the enhanced cyborg that you have always wanted to be!</i>	that you have always wanted to be	that	object
